

Cervical Fixation

SHARK PEEK ACIF CAGE SYSTEM

The SHARK PEEK ACIF Cage is manufactured by means of PEEK OPTIMA and has an anatomically optimised form for applications in the cervical fixation field.

It can be used as a single cage or as a cage/plate construct with an adaptable cervical spine plate. The three long titanium spikes are used as X-ray markers and ensure the fixed and secure cage positioning.

The available SHARK PEEK ACIF Cage range and the corresponding adaptable cervical spine plate in the appropriate size covers any required intervertebral

spaces and allows for the spondylodesis of several segments.

All of the implants and instruments of the SHARK PEEK ACIF Cage System are supplied in a non-sterile package and well-placed on the set.
