

## Lumbar Fixation

# BASIC PEEK PLIF CAGE SYSTEM

The BASIC PEEK PLIF Cages System is indicated for the immobilisation and stabilisation of the spinal column segments in addition to the fusion of the thoracic, lumbar and/or sacral spinal column.

The anatomic form and interlocking of the cages ensures a stable fixation in the intervertebral space. The three X-ray markers made of titanium ensure a good visualisation of the positioning of the cages under X-ray control. The optimized larger holes in the cage enable the user to fill in bone transplant or bone replacement materials for a better and faster fusion.

The BASIC PEEK PLIF Cages range covers common sizes. The implants and instruments are supplied in a non-sterile package.
